The Maryland Clean Energy Center (MCEC) was created as an instrumentality of state by the Maryland General Assembly, in 2008, with an economic development mission to advance the adoption of clean energy and energy efficiency products, services, and technologies. MCEC also supports innovation and technology deployment to help achieve state renewable energy generation, energy conservation, and greenhouse gas emission reduction goals. MCEC uses statute enabled financing authority to leverage private capital investments and provide financing to assist residential, commercial, municipal, and not-for-profit consumers.
